PRE-ARCHITECTURE

NATURE OF WORK: People need places in which to live, work, play, learn, worship, meet, govern, shop, and eat. These places may be private or public; indoors or outdoors; or rooms, buildings, or complexes, and together, they make up neighborhoods, towns, suburbs, and cities. Architects-licensed professionals trained in the art and science of building design- transform these needs into concepts and then develop the concepts into images and plans of buildings that can be constructed by others.

EDUCATIONAL QUALIFICATIONS: All states and the District of Columbia require individuals to be licensed (registered) before they can call themselves architects and contract to provide architectural services. During this time between graduation and becoming licensed, architecture school graduates generally work in the field under supervision of a licensed architect who takes legal responsibility for all work. Licensing requirements include a professional degree in architecture, a period of practical training or internship, and a passing score on all divisions of the Architect Registration Examination (ARE).

JOB OUTLOOK: Employment of architects is expected to grow about as fast as the average for all occupations through 2014. Besides employment growth, additional job openings will arise from the need to replace the many architects who are nearing retirement, and others who transfer to other occupations or stop working for other reasons. Internship opportunities for new architectural students are expected to be good over the next decade, but more students are graduating with architectural degrees and some competition for entry-level jobs can be anticipated.

SALARY: According to the Occupational Outlook Handbook, the median annual earnings of wage and salary architects were **\$60,300** in 2004. The middle 50 percent earned between **\$46,690** and **\$79,230**. The highest 10 percent earned more than \$99,800.
